

AI automation specialist who builds RAG pipelines, AI agents, and workflow automation where data integrity is the design goal: source-cited retrieval, failure-path testing, confidence-gated learning. Owns the path from discovery to handover.

CAPABILITIES			
AUTOMATION	n8n, Make, Zapier, process mapping, workflow automation	AI & LLMS	OpenAI, Claude, Gemini (Vertex AI), Copilot, Claude Skills, RAG architecture, dual-retriever design, vector databases, prompt engineering & failure-path testing, agent escalation & confidence gating, agent memory & context engineering, prompt design
GOHIGHLEVEL	workflow builder, trigger filters, tag & segmentation architecture, opportunity/pipeline stages, appointment & calendar automation, conditional branching, duplicate-trigger guards, outbound webhooks, internal notifications, API v2 two-way sync (contacts, opportunities, notes, custom values, custom fields)		

SELECTED WORK

Automated support agent on a self-maintaining knowledge base

n8n · Cloudflare Workers AI · Pinecone · Google Drive · Supabase

Automated support agent on an authoritative knowledge base — 1,000+ indexed pages, a cited source on every answer, and sub-3-second average responses. Uses dual Pinecone retrievers (documents + answered questions), a Drive-watch pipeline that syncs vectors via the Pinecone REST API, and confidence-gated human escalation. Tested against retrieval failures and citation-bait; validated in mock runs, go-live pending.

- EXPERIENCE
- Independent AI Systems Engineer · Independent practice**

Mar 2026 - Present · Remote

 - Engineer agent tooling as workflow enforcers rather than prompt wrappers — skills that gate on hard preconditions and refuse to proceed when one fails, backed by a memory layer that surfaces prior findings before related work.
 - Productised that platform into a client-facing automation estate audit — what a client runs, whether it still works, what it costs, where credentials are exposed — onboarded with one config entry and read-only access, nothing installed client-side.
- Presales Solutions Engineer · Concentrix**

Feb 2018 - Mar 2026 · Philippines

 - Translated client business requirements into cost-effective infrastructure architectures across network security, compute, and storage — from targeted upgrades to full-scale migrations.
 - Worked directly with stakeholders and international teams.
- Windows System Administrator · Hewlett Packard Enterprise**

Apr 2016 - Jun 2017 · Taguig

 - Authored detailed change requests and led end-to-end implementation aligned to approved plans and SLA requirements.
 - Developed runbooks and process documentation to standardize procedures and improve team competency.

- EDUCATION & TRAINING
- Bachelor of Science in Electronics and Communications Engineering (BSECE)**

Polytechnic University of the Philippines

2010 - 2015
- RIM Bootcamp — System Administration Training**

Fujitsu Philippines Global Delivery Center

2015
